

## ABSTRACT

A method for transmission of a useful data object from an exchange component to a mobile station, whereby a communication network is elected, in which the useful data object is to be transmitted and the exchange component transmits the useful data object to the mobile station when it is determined that said the mobile station is hooked into the at least one communication network and it is determined that the exchange component has a delivery request for the useful data object. A mobile station, an exchange component and a telecommunication device, are further disclosed, where each is embodied such as to be able to carry out such a method.
